Entire Person Health Report

Your health journey begins here. Discover your personalized health plan based on 200+ data points. Your report includes scores for body functions and lifestyle factors, essential for understanding your overall well-being. Discover personalized recommendations tailored to your unique needs.

Table of Contents

Let's take a look at the things we have covered in this comprehensive report

HEALTH SCORE	2
Your Entire Person Health Report score and overall risk zone are based on your self-assessment and lab results. This score reflects the combined impact of your lifestyle factors (roots) and body system functions (branches) on your overall health.	
YOUR HEALTH RISK TREE	3
Your Health Risk Tree is a visual map of your well-being. It shows how your 5 lifestyle factors (like nutrition, exercise, sleep, stress, and relationships) influence your 9 body functions (like Digestion, Metabolism, Immunity, etc.). This report gives you a clear picture of your health, including scores and risk levels for each area. This helps you identify where to focus for improvement.	
RECOMMENDATIONS FOR YOU	6
Your personalized health plan focuses on six key pillars: Nutrition, Physical activity, Sleep, Mental well-being, Social connections, and Harmful substances. These recommendations are curated basis the risk zones of all your body systems. Remember, consistency is key to achieving your goals.	
UNLOCK YOUR BEST HEALTH WITH SUPPLEMENTS TAILORED FOR YOU	13
Your health journey is unique—your supplements should be too. Our personalized recommendation tool helps you discover the right nutrients to fill gaps, support your body's natural functions, and elevate your well-being.	
YOUR BODY FUNCTIONS	25
These essential processes that keep your body functioning optimally, such as digestion, metabolism, and immune function. Think of them as the branches of your health tree, each interconnected and vital for your overall well-being. Understanding and addressing imbalances in these branches promotes optimal well-being.	
LIFESTYLE FACTORS	35
These are the foundations of your health, like the roots of a tree, providing essential nourishment and support. By nurturing these roots, you can cultivate a thriving health tree. In this section you will discover your health score for each of the Lifestyle Factors, risk zones, and how your lifestyle factors (roots) impact your body system functions (branches).	
BIOLOGICAL AGE	41
Biological age isn't just about the number of candles on your birthday cake. It's a measure of your body's true health and vitality, taking into account factors like cellular health, inflammation, and metabolic function.	
LAB TEST RESULTS	42
Your lab tests are in! Do take a look at your biomarker reports and risk zones in this section. These insights are part of your comprehensive Entire Person Health Report.	

Your Health Score

**64 / 100**

Your health score is moderate, indicating some health risks.

0

High Risk

50

Moderate Risk

80

Low Risk

100

Based on 200+ Data Points across lab tests and health questionnaire.

What does the Health Score mean?

Your Entire Person Health Report is based on a comprehensive assessment of 200+ data points, providing a clear picture of your overall health status and areas for improvement.

Low Risk: If your overall health score is high, you're generally healthy with minimal risks.

Moderate Risk: A moderate score indicates there are potential areas for improvement. Focus on addressing potential health risks identified in your report.

High Risk: A low score signals significant health risks. Prioritize your health, consult a doctor, and address the specific concerns highlighted in your report.

Disclaimer: This health score is for informational purposes only and should not replace professional medical advice, diagnosis, or treatment. It is based on your health questionnaire responses and lab test results. While it offers a general overview of your current health and potential future risks, it is not a definitive health assessment.

Your Health Risk Tree

Branches: Body Functions

Roots: Lifestyle Factors

Your Health Tree is a visual representation of your overall well-being. It's like an ecosystem where your lifestyle factors (roots) nourish and support your body functions (branches). Just as a tree needs strong roots to thrive, your health depends on a balanced foundation of lifestyle factors. By understanding these connections, you can identify areas for improvement and optimize your health.

For example, your digestion (branch) is impacted by nutrition and exercise (roots).

Your Health Risk Tree

Your Health Tree provides insights into 9 body functions and 5 lifestyle factors. Focus on areas with red scores, which indicate high risk, and yellow scores, which reflect moderate risk. Green areas signify low risk and good performance. For detailed insights and personalized recommendations, explore the sections on body functions and lifestyle factors.

Branches: Body Functions

Roots: Lifestyle Factors

Your Probable Health Risks

- **Chronic Inflammation Risk**

The lab results show high levels of C-Reactive Protein (CRP) and High-Sensitivity C-Reactive Protein (hs-CRP), which are markers of inflammation. Chronic inflammation is associated with various health issues, including heart disease and autoimmune conditions.

- **Heart Disease Risk**

The presence of high Lipoprotein(a) and low HDL cholesterol levels indicate an increased risk for cardiovascular diseases. These biomarkers are linked to the buildup of plaques in arteries, which can lead to heart attacks or strokes.

- **Anemia and Bone Health Concerns**

Low levels of Vitamin B9 (Folic Acid) and low hemoglobin suggest a risk of anemia, which can cause fatigue and weakness. Additionally, low ionized calcium levels may affect bone health, increasing the risk of osteoporosis.

Substances

Key Areas of Improvement

Based on our analysis, we have identified 3 body functions that requires your attention. The personalized recommendations given below addresses them. Remember consistency is the key!

Elimination

Heart And Vascular
Dynamics

Metabolic Health

Recommendations to wellness based on 6 Pillars

Nutrition

Your nutrition plays a vital role in your overall well-being. By optimizing your diet, you can support your body's functions, boost your energy levels, and improve your overall health. Our personalized recommendations focus on addressing any nutritional deficiencies and providing you with the fuel you need to thrive.

Optimal nutrition for you

1. Monitor Food Intolerances

Keep a food diary to identify any foods that may cause bloating or irregular bowel movements.

2. Incorporate Chia Seeds

Add chia seeds to your diet, as they are high in fiber and can help regulate bowel movements and improve gut health.

3. Increase Omega-3 Fatty Acids

Fatty fish like salmon or plant-based sources like flaxseeds can help reduce inflammation and improve heart health.

4. Avoid Skipping Meals

Maintain regular meal patterns without skipping meals to keep metabolism steady and prevent energy crashes.

Supplements

Elevate Your Health—Personalized Supplements for a Stronger, Energized You

Your health journey is unique, and the right supplements can make all the difference. Our personalized recommendation tool helps you discover precisely what your body needs to bridge nutritional gaps, support natural functions, and elevate your overall well-being. Every recommendation is rooted in science, designed to align with your lifestyle, and tailored to help you feel your best.

Take control of your health today. Every small step toward wellness brings you closer to a life of vitality, strength, and balance.

Disclaimer:

Always consult with a qualified healthcare provider before starting any supplementation to ensure it's appropriate for your health needs. This tool is for educational purposes only and does not replace professional medical advice. Discuss all supplements with your healthcare provider to avoid potential interactions and complications.

1. Multi-Vitamins

HOW IS IT BENEFICIAL?

A daily multivitamin can boost calcium for stronger bones, enhance iron for better energy, support B12 for brain health, and improve magnesium and B6 for mood and muscle function. Plus, it helps lower CRP levels, promoting overall wellness and vitality. Remember this information.

TARGETED NUTRITIONAL ELEMENTS

- Vitamin C
- Vitamin B12
- Vitamin E

POSITIVE IMPACT ON BODY FUNCTIONS

- Immune System
- Skin & Joints
- Nervous System

BRANDS & DOSAGES

1. Garden of Life - Vitamin Code Raw Iron

- 1 capsules, -
- Daily, 3-6 months.

Your Body Functions at a Glance

“

"Your health is a complex ecosystem.' This section reveals the intricate relationship between your lifestyle factors and body functions, providing insights into your health scores, risk zones, and areas for improvement. By understanding these connections, you can optimize your well-being and create a thriving health ecosystem."

- **Dr. Deepak Sharan**

Chief Executive Officer & Chief Scientific Officer

”

Digestive Health

Digestion is your body's way of breaking down food into nutrients. It's like a factory, turning food into fuel. Proper digestion ensures you get the energy and nutrients you need to function well. Problems with digestion can lead to discomfort, weight issues, and even other health problems.

Insights

Disclaimer: This is entirely based on your responses to the subjective questionnaire.

DOING GREAT

- Practices responsible drinking
- Maintains consistent eating habits

NEEDS ATTENTION

- Frequent health problems
- Hasty eating habits
- Difficulty with bowel movements
- Lingering hunger pangs
- Regular post-meal discomfort

Your Biological Age

Your Biological Age is 3 years and 0 months more than your Calendar Age

+ 3 years and 0 months ▲

How to read a biological age scale?

A Biological Age (BA) scale shows how your body's health compares to your actual age.

Key Tips for Interpretation:

- A lower biological age, it means your body is healthier and aging slower.
- If your biological age is higher, it suggests areas to improve; like diet, exercise, or stress management.

Biological age can be measured at any time, but it's most accurate and meaningful from your early 20s onward, as your body's systems and biomarkers have stabilized. Predictions become even clearer in midlife and beyond, when age-related changes are more pronounced.

Please Note: If you're taking medications or supplements that affect biomarkers like cholesterol, blood pressure, inflammation, etc., your biological age might appear younger due to improved health markers from those treatments.

Lab Test Results

Your Lab Results: A Window into Your Health

This section provides a detailed breakdown of your lab test results, offering insights into your overall health. We've analyzed your biomarkers and categorized them into risk zones based on established guidelines.

Integrative Care vs. Traditional Healthcare

Root Causes Tackled

We target the underlying causes of your health issues, not just the symptoms.

Holistic Approach

We treat your whole body and mind by combining modern medicine with Ayurveda, nutrition science, and mental health support.

Sustainable Wellness

We provide tools and strategies to help you achieve long-lasting health, not just temporary relief.
